Filed : November 14, 2001

AMENDMENTS TO THE CLAIMS

1. (Previously presented) A footwear lacing system, comprising:
a footwear member including first and second opposing sides configured to fit around a foot;
a plurality of opposing cable guide members positioned on the opposing sides;
a multi strand cable worked to reduce the interstitial space between the strands, the cable guided by the guide members, the cable having a first end and a second end, the cable rotationally linked to a spool; and
a tightening mechanism attached to the footwear member and coupled to the spool, the tightening mechanism including a control for winding the cable around the spool to place tension on the cable thereby pulling the opposing sides towards each other.
2. (Original) A footwear lacing system as in Claim 1, wherein the first and second ends are removably connected to the spool.
3. (Original) A footwear lacing system as in Claim 1, wherein the first and second ends are fixed to the spool.
4. (Original) A footwear lacing system as in Claim 1, wherein the cable is connected to the spool at a point spaced apart from the ends of the cable.
5. (Original) A footwear lacing system as in Claim 1, wherein the cable extends through a bore through the spool.
6. (Original) A footwear lacing system as in Claim 1, wherein the cable is removably connected to the spool such that the cable may be removed from the footwear lacing system without removing the spool.
7. (Original) A footwear lacing system as in Claim 1, wherein the cable has a diameter within the range of from about 0.020" to about 0.040".
8. (Original) A footwear lacing system as in Claim 7, wherein the cable has a diameter within the range of from about 0.025" to about 0.035".
9. (Original) A footwear lacing system as in Claim 8, wherein the cable comprises rounded ends.
10. (Original) A footwear lacing system as in Claim 1, wherein the cable is slideably positioned around the guide members to provide a dynamic fit in response to movement of the foot within the footwear.

Appl. No. : 09/993,296
Filed : November 14, 2001

11. (Original) A footwear lacing system as in Claim 10, further comprising at least one expansion limiting band thereon, which resides in an expansion limiting plane.

12. (Original) A footwear lacing system as in Claim 11, wherein the expansion limiting band is positioned on the footwear such that it surrounds the wearer's ankle.

13. (Original) A footwear lacing system as in Claim 12, wherein the expansion limiting plane extends substantially horizontally through the footwear.

14. (Original) A footwear lacing system as in Claim 1, wherein the tightening mechanism comprises a rotatable reel for receiving the lace.

15. (Original) A footwear lacing system as in Claim 14, further comprising a rotatable knob, selectively engageable with the reel.

16. (Original) A footwear lacing system as in Claim 15, wherein the knob is rotatable only in a first, lace tightening direction.

17. (Original) A footwear lacing system as in Claim 15, wherein the knob is moveable between an engaged position and a disengaged position, and the reel is rotationally locked to the knob when the knob is in the engaged position.

18. (Original) A footwear lacing system as in Claim 17, wherein the knob has an axis of rotation and the knob is moveable between the engaged position and the disengaged position by moving the knob along the axis of rotation.

19. (Canceled)

20. (Canceled)

21. (Canceled)

22. (Previously presented) A closure system for footwear, comprising:

a footwear member including a lacing zone in between first and second opposing sides configured to fit around a foot;

one or more pairs of opposing cable guide members positioned on the opposing sides and defining a cable path which extends throughout the lacing zone;

a cable guided by the guide members and extending in a zig-zag pattern throughout the lacing zone, the cable having a first end and a second end, the first and second ends removably secured with respect to a spool; and

Appl. No. : 09/993,296

a tightening mechanism attached to the footwear member and coupled to the spool, the tightening mechanism including a control for winding the cable around the spool to place tension on the cable thereby pulling the opposing sides towards each other.

23. (Previously presented)The closure system for footwear of Claim 22, wherein the control has an axis and is rotatable about its axis.

24. (Previously presented)The closure system for footwear of Claim 22, wherein the control is coupled to the spool such that rotating the control in one direction rotates the spool, while rotating the control in an opposite direction does not rotate the spool.

25. (Previously presented)The closure system for footwear of Claim 22, wherein the control is rotatable in only one direction.

26. (Previously presented)The closure system for footwear of Claim 22, wherein the guide members comprise a tube.

27. (Previously presented)The closure system for footwear of Claim 22, further comprising a spring configured to automatically wind cable slack around the reel.

28. (Previously presented)The closure system for footwear of Claim 22, wherein the first and second ends are removably connected to the spool such that the cable may be removed from the footwear lacing system without removing the spool.

29. (Previously presented)The closure system for footwear of Claim 22, wherein the cable comprises a plurality of strands.

30. (Previously presented)The closure system for footwear of Claim 29, wherein the strands are secured together at each of the first and second ends.

31. (Previously presented)The closure system for footwear of Claim 22, wherein the cable is slideably positioned around the guide members to provide a dynamic fit in response to movement of the foot within the footwear.

32. (Previously presented)The closure system for footwear of Claim 22, further comprising at least one expansion limiting member thereon, which resides in an expansion limiting plane.

33. (Previously presented)The closure system for footwear of Claim 32, wherein the expansion limiting member is positioned on the footwear adjacent the wearer's ankle.
